# Introduction

Tounes.AI is an AI-powered tourist assistant designed to transform the way people explore Tunisia.

Instead of just searching for information, users can interact with an intelligent system that identifies landmarks, suggests destinations, and generates personalized stories about places in Tunisia.

Our goal is to make tourism smarter, more interactive, and more emotional.

# Problem Statement

## Current Tourism Challenges :

- Dry, impersonal information about landmarks
- Language barriers (Arabic/French/English)
- No emotional or immersive connection
- Generic content → same everywhere

## Result :

- Cultural heritage feels static, not “lived”
- Tourists miss authentic experiences

## Example:

Visiting Carthage → reading Wikipedia-style text → no emotion

# Core Insight

People remember stories, not facts

- Traditional : “Carthage was founded in 814 BC”
- Immersive : “You stand where Hannibal once crossed the Alps...”

## Insight:

- By converting historical facts into stories, tourists remember experiences
- Emotional connection + storytelling = better engagement

# Our Solution

Tounes.AI transforms Tunisian landmarks into :

## Features :

- Personalized immersive stories
- Multi-language audio experiences
- Emotion-driven storytelling
- Selectable story styles

## Key Principle:

- AI amplifies culture, it does not replace it

## User Journey Example :

1. Upload photo of place exp( Sidi Bou Said, al jam , ... .)
2. AI detects location
3. User selects story style (Historian, Legend Keeper, etc.)
4. AI generates a story in Arabic/French/English
5. Audio plays personalized narration

# How It Works

## Step-by-Step Flow :

1. Upload photo of a landmark OR select suggested destination
2. AI identifies location via Vision Model
3. Choose storytelling style:
  - Historian
  - Legend Keeper
  - Time Traveler
  - Romantic
  - Kid Adventure
  - Director
4. Enter personal details (name, traveling alone/with family/friends)
5. AI generates personalized story
6. Audio narration in selected language

## Languages Supported:

Arabic, French, English

## Visual Tip:

Diagram of flow : Photo → AI → Story → Audio

# | Target Audience

- Solo travelers
- Couples
- Families
- Schools / Students
- Tour guides & cultural institutions

## Why:

- Anyone visiting Tunisia wants interactive & engaging experiences
- Supports education and tourism sectors

# Project Objectives

- Enhance tourism through AI personalization
- Make cultural heritage engaging & interactive
- Support multilingual storytelling
- Allow emotional, immersive experiences
- Easy-to-use & scalable platform

# Key Features

- Landmark recognition (Vision AI)
- Personalized AI-generated stories
- Multi-language support (Arabic / English / French)
- Storytelling style selection
- Audio narration integration
- Scalable architecture for future expansion
- Interactive & user-friendly interface

## Example:

Upload a picture of El Djem → AI detects → generate story in French → play audio

# Technical Architecture

Frontend :

LLM :

Groq (Llama 3.3 70B)

Vision :

Groq (Llama 4 Scout)

TTS :

Microsoft Edge TTS

Data :

# Impact & Benefits

## Tourism Impact:

- Makes visiting landmarks memorable
- Creates immersive experiences
- Encourages sharing on social media

## Cultural Impact:

- Preserves heritage through stories
- Makes history accessible to youth
- Supports Tunisian Arabic storytelling

# Long-Term Vision

**Goal:** Become “The AI storytelling engine for cultural heritage”

## **Future Evolution:**

### **AI Travel Planner:**

- Personalized itineraries based on user preferences
- Suggested landmarks, restaurants, cultural events

### **Interactive Social Features:**

- Share your AI-generated story with friends/family
- Compare experiences & stories

### **Smart Tourism Insights :**

- Data analytics for visitor trends
- Crowd management & destination optimization

# | Conclusion

Tounes.AI redefines how tourists experience Tunisia by turning static landmarks into living, immersive stories. Through AI-powered storytelling, personalized journeys, and multi-language audio narration, it creates emotional and educational connections with cultural heritage. This innovative platform not only enhances tourism experiences but also preserves Tunisian culture, engages visitors of all ages, and offers a scalable roadmap for the future from mobile apps and AR integration to global expansion.
